

THE FACTORS

- ❖ There are four different Calculations using the C Mill Method
 1. Standard Calculation for Determining VD of a Circuit
 - ❖ This is where you know the Amps/Type&Size/Length but NOT VD
 2. Conductor Size Needed Calculation
 - ❖ Here you know the Amps/Length/VD but NOT Type&Size Needed
 3. Conductor Length Allowed
 - ❖ Here you know the Amps/Type&Size/VD but NOT Length Allowed
 4. Circuit Amperage Allowed
 - ❖ Here you know the Type&Size/Length/VD but not Allowable Amps
